

Nertype

Nertype language is a constructed (opposing natural) literary language or *conlang* for short. It was inspired by toki pona, lojban and my own experience in using programming languages. My goal was to create a minimalistic yet expressive language without ambiguity.

We can be vague, but not ambiguous.

— Some lojban speaker

Basics

Literal A sequence of characters in set of a-z, A-Z and underscore (_).

Numeral A sequence of digits representing some number.

Predicates

Predicate	Arity	Definition
