

# Nertype

**Nertype language** is a constructed (opposing natural) literary language or *conlang* for short. It was inspired by toki pona, lojban and my own experience in using programming languages. My goal was to create a minimalistic yet expressive language without ambiguity.

We can be vague, but not ambiguous.

— Some lojban speaker

## Basics

List of shorthands:

**P** Predicate

**N** Natural number
